DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, 15-18, drawn to methods of inducing or enhancing production or secretion of a secondary metabolite in a plant transformed with an ABC transporter and DNA and host cells thereof, classified in class 800, subclass 279 for example.
- II. Claim 14, drawn to an isolated polypeptide that induces or enhances production or secretion of at least one secondary metabolite in plant cells or in a plant, classified in class 435, subclass 183 for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are the methods of inducing or enhancing production or secretion of a secondary metabolite in a plant transformed with an ABC transporter and the DNA required for the method of Group I and the isolated polypeptide that induces or enhances production or secretion of at least one secondary metabolite in plant cells or in a plant of Group II; wherein the polypeptide is not required for the methods of Group I and the polypeptide of Group II and the isolated polynucleotide of Group I do not share the same structure, function or chemical composition.

Art Unit: 1638

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, require a different field of search (see MPEP § 808.02), and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
